FIREMON

Enforce Compliance

The Fully-Customizable Platform to Meet Any Compliance Standard

Regulatory and policy compliance is a fact of life for modern enterprises. From external standards like PCI-DSS, NIST, HIPAA, GDPR and others, to internal requirements and best practices, maintaining compliance requires more than simply checking a box.

FireMon Delivers Customizable Network Security Policy Compliance

FireMon provides compliance management tools to create a proactive compliance posture, keeping you ahead of violations, instead of chasing after them. Our industry-leading real-time platform streamlines security operations and ensures that policies are consistent across the entire enterprise. This consistency is the key to our flexibility when it comes to providing near-comprehensive compliance support to a wide range of regulatory and legal reporting and compliance regimes.

Highly-customizable reports deliver a one-click overview of compliance throughout the entire environment tailored to precise business needs. Automatic scans identify and remove rules that violate internal and external compliance standards including PCI-DSS, HIIPA, GDPR, and many more. Real-time detection identifies and notifies administrators of existing policy violations and scans for any new ones before changes are deployed.

Flexible by Design

Out of the box, FireMon comes with dozens of preconfigured reports designed to meet the reporting requirements of nearly all major compliance frameworks. Each of these reports is customizable to meet the exact needs of our customers. Additionally, we have a range of best practice and industry standard reports to help simplify internal compliance reporting. Again, each of these is fully customizable to meet the specific needs of any organization.

The power and flexibility of FireMon's proprietary Security intelligence Query Language (SiQL) is built into the core of our platform, allowing not just easy and instant search, but also the creation of endlessly customizable reports that can be run manually, on set schedules, or any time a change is detected in the network.
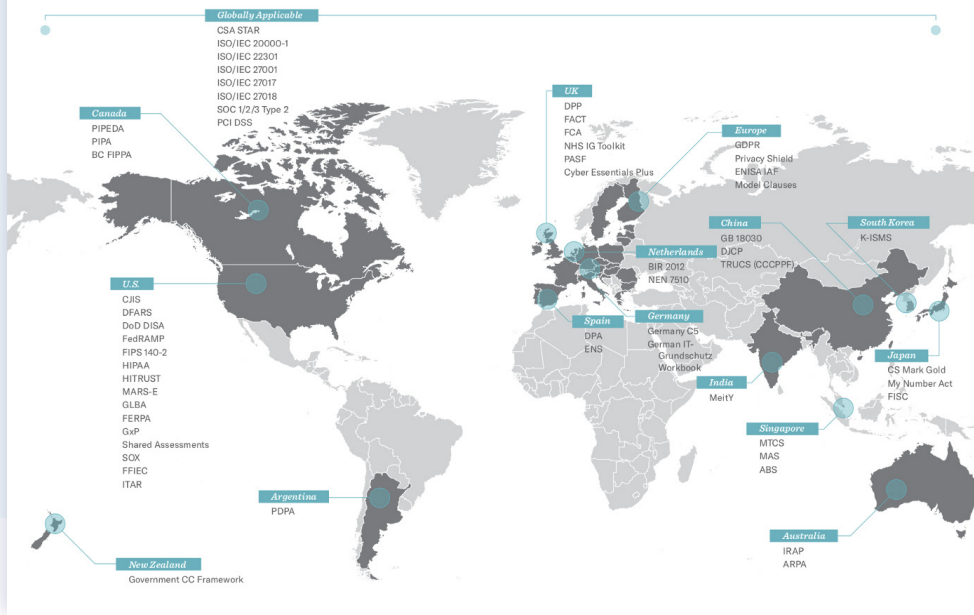

SiQL powers our ability to support these compliance standards and does not require expensive professional services teams or created in a black box by development teams (though we do have expert professional services as needed for particularly complex or unique needs.) As a result, any security professional with a thorough knowledge of the applicable compliance framework in question could create controls and build reports to support reporting to match any compliance requirement. FireMon also provides the only API-first security policy management platform, allowing deep integration into existing technologies and workflows without professional services engagements.

SUPPORTED COMPLIANCE REQUIREMENTS

– HIPAA

– NIST

– PCI-DSS

– Sarbanes-Oxley (SOX)

– NERC CIP

– CSA

– CCPA

– GDPR

– 23 NYCRR 50

… and more

FireMon is able to support a wide range of global compliance standards as they pertain to maintaining and reporting on firewall connectivity and configurations, however we make no claim to support aspects of these standards that fall outside security policy management.

NIST, PCC-DSS, HIPAA, privacy regulations such as GDPR, 23 NYCRR 500, CCPA, and many more compliance regimes demand companies ensure that their operations comply with standard best practices and requirements. But no two companies are the same. Global enterprises are often subject to a wide range of compliance regimes, ranging from ISO to SWIFT to SOX 1 and 2 to NESA and SAMA to BSI and countless more.

FireMon simplifies policy management and compliance. Our proactive compliance engine monitors the environment continually for changes, and alerts on any change that threatens compliance. Guardrails help keep new policies and policy changes from running afoul of compliance requirements, and new policies can be tested prior to implementation to ensure they meet compliance requirements.

REGIONS & REGIMES

– UK: SOC 1 & 2, PCI-DSS, GDPR, BSI, ISO27001

– DACH: SOC 1 & 2, GDPR

– Middle East: NESA, SAMA, ISO27001, PCI-DSS

– Rest of EMEA: Swift

FIREMON

FireMon's mission is to improve security operations that will in turn lead to better security outcomes. FireMon delivers industry-leading security policy management, cloud security operations, and cybersecurity asset management solutions. Our platform is the only real-time solution that reduces firewall and cloud security policy-related risks, manages policy changes, and enforces compliance. FireMon's DisruptOps is the only distributed cloud security operations offering that detects and responds to issues in the fast-paced public cloud environments. Our cloud-based Lumeta cybersecurity asset management solution scans entire infrastructures to identify everything in the environment and provide valuable insights into how it's all connected.
