

About LogRhythm

LogRhythm helps security teams stop breaches by turning disconnected data and signals into trustworthy insights. From connecting the dots across diverse log and threat intelligence sources to using sophisticated machine learning that spots suspicious anomalies in network traffic and user behavior, LogRhythm accurately pinpoints cyberthreats and empowers professionals to respond with speed and efficiency.

With cloud-native and self-hosted deployment flexibility, out-of-the-box integrations, and advisory services, LogRhythm makes it easy to realize value quickly and adapt to an ever-evolving threat landscape. Together, LogRhythm and our customers confidently monitor, detect, investigate, and respond to cyberattacks. Learn more at logrhythm.com.

LogRhythm Products and Solutions

LogRhythm SIEM

Self-Hosted Security Information and Event Management

Detect and remediate security incidents quickly and for a lower cost of ownership. With intuitive, high-performance analytics, enhanced collection, and a seamless incident response workflow, LogRhythm SIEM helps your organization uncover threats, mitigate attacks, and comply with necessary mandates.

LogRhythm NDR

Network Detection and Response

Gain 360-degree visibility to better protect your network. LogRhythm NDR monitors and analyzes vast amounts of network traffic with both deterministic rules and machine learning to surface the most pertinent threats that attack outside the perimeter.

LogRhythm Axon

Cloud-Native SaaS Security Operations Platform

Leverage powerful security analytics and automatic log collection and enrichment to easily identify, analyze, and report on potential threats. LogRhythm Axon provides automatic visibility into cloud and self-hosted environments, helping security teams focus on the work that matters.

LogRhythm Cloud

Cloud-Based SIEM

Secure your organization with our complete SIEM experience, but without managing infrastructure, administration, upgrades, or troubleshooting capacity issues. LogRhythm Cloud provides the ease and flexibility of a SaaS solution.

LogRhythm UEBA

User and Entity Behavior Analytics

Extend your SIEM detection capabilities by using advanced analytics to monitor your users with LogRhythm UEBA. This add-on offers extra layers of security monitoring and machine learning to detect user-based anomalies and helps analysts prioritize the findings for investigation and response.
