

CA Identity Suite

At A Glance

CA Identity Suite delivers comprehensive identity management and access governance capabilities in a unified, easy-to-use interface. The solution provides an intuitive, self-service console that can improve business user productivity by delivering identity and entitlement data in a common business language, as well as a shopping cart experience for requesting access to new systems. CA Identity Suite also offers robust administrative features for IT users that help minimize administrative overhead and improve audit and compliance performance via centralized policy enforcement.

KEY BENEFITS

- **One-stop shop** simplifies and centralizes access to all identity processes with fast time-to-value.
- **Increase business user productivity** with easy-to-use, self-service features.
- **Reduce identity risks** with real-time policy enforcement and sophisticated entitlement analysis.
- **Increase audit and compliance efficiency** by streamlining certification and provisioning.

KEY FEATURES

- **Deployment Xpress.** Make deployment of common use cases easy by using a set of predefined user scenarios.
- **Connector Xpress.** Simplify connectivity to your apps and reduce deployment and maintenance costs.
- **Config Xpress.** Reduce time to migrate environments and improve visibility into configuration status.
- **Policy Xpress.** Eliminate the need for special coding skills or code maintenance costs.
- **Migration Xpress.** Existing customers migrate quickly to the virtual appliance architecture, simplifying and accelerating deployment.

Business Challenges

Managing who has access to what has become increasingly complex. IT manages more users, more apps, more entitlements and more user-related data.

Organizations need to demonstrate compliance with a wide variety of regulations and protect against cyber and security threats and the risk of data loss.

Performance and scale cannot come at the price of usability. Organizations need a breadth of provisioning capabilities and enterprise scale deployment with the ease of use business users expect.

IT organizations face ongoing pressures to reduce operational expenses and automate common identity-related tasks such as provisioning, entitlements certification and access requests.

Solution Overview

CA Identity Suite delivers core enterprise-grade identity management and governance capabilities, including broad provisioning support for on-premises and cloud apps, extensibility and flexibility to integrate with other IT systems, and consumer-grade scale.

But quality performance does not come at the price of usability. CA Identity Suite presents an intuitive, convenient user experience that dramatically simplifies the access request process for business users.

CA Identity Suite simplifies identity management and access governance with features including:

- **Self-service identity portal.** Centralizes access to all identity services and provides an intuitive access request shopping cart.
- **Web application launcher.** Provides one place for users to easily access all of their applications.
- **Proactive analytics.** Advise, prevent and alert the business user of potential policy violations.
- **Privilege cleanup.** Examine existing system entitlements and highlights excessive privileges.

Critical Differentiators

CA Identity Suite uniquely helps bridge the divide between current identity and access management (IAM) technologies and business users. It is an integrated suite of identity management and governance capabilities that combines robust functionality with an intuitive, convenient and business-oriented experience. CA Identity Suite's strengths are particularly around:

Business-oriented user experience.

Improve user satisfaction and productivity with intuitive business user experience to simplify processes such as user access requests and access certifications.

Fast time-to-value. Deployment and configuration tools, including a virtual appliance feature, simplify the deployment process and simplify extensions without coding by using a set of predefined user scenarios (Xpress technologies).

Scalability. Proven to support the largest and most complex environments (validated up to 100 million users).

Breadth of solution. One unified solution for access to all identity management services for all users, plus an integrated approach to security with capabilities such as privileged access management and governance, single sign-on, API management and strong authentication.

CA Identity Suite delivers a simple, business-oriented interface for key identity functions, helping to bridge the divide between current IAM technologies and business users.

Supported Environments

CA Identity Suite can be deployed in a variety of ways, from a versatile standalone deployment to a pre-packaged virtual appliance.

- **Standalone deployment:** Tun installers on your choice of OS, application server and user store.
- **Virtual appliance:** Deploy in minutes a pre-packaged solution on VMWare (OVA) or on AWS (AMI) that includes integrations, configurations and clustering.
