

Symantec™ Endpoint Protection on Amazon Web Services (AWS)

Data Sheet: Endpoint Security

Overview

While moving to the cloud can support business agility while reducing IT costs, security continues to be the top concern for cloud adoption. Given the inherent risks of data breaches, malicious attacks, complex access and visibility, you want to ensure that your cloud is under control. Symantec™ Endpoint Protection delivers multiple layers of protection for virtual machines on the Amazon Web Services (AWS) platform. In addition to antivirus, it utilizes reputation-based analysis and real-time behavioral monitoring technology that applies machine-learning heuristics to detect and block unknown malware. It also provides policy lockdown features such as application control to your virtual machines on AWS. Leveraging the world's largest threat intelligence network, Symantec Endpoint Protection effectively protects against targeted attacks and advanced threats, facilitates more accurate detection without slowing down the performance in virtual environments.

Unrival Security

Stops targeted attacks and advanced persistent threats with intelligent security and layered protection

- Symantec Endpoint Protection leverages the world's largest civilian threat intelligence network to deliver advanced protection at the endpoint. This network consists of telemetry data coming from 175 million endpoints and 57 million attack sensors in 175 countries, providing unique visibility into the latest security threats.
- Derived from this intelligence network, our unique Insight™ technology identifies file reputation by analyzing key file attributes such as how often a file has been downloaded, how long a file has been there, and where it is being downloaded from. This information allows us to block more threats and defend against new, mutating malware.
- SONAR™ technology, also powered by this intelligence network, monitors application behavior in real-time and stops targeted attacks and zero-day threats
- Network Threat Protection analyzes incoming data streams and blocks threats while they travel through the network before hitting endpoints
- Symantec™ Endpoint Protection detects and removes threats more accurately¹, repeatedly scoring a AAA rating, the highest score, by Dennis Labs Real World A/V Test

Blazing Performance

Performance so fast your users won't know it is there

- Insight™ reputation technology accurately identifies file reputation so only at-risk files are scanned, effectively eliminating up to 70 percent of scan overhead compared to traditional solutions
- Symantec™ Endpoint Protection outperforms all products in its class in terms of scan speed and total performance impact²
- Optimizes content delivery for faster distribution and lower storage requirements. Virus definition sets require 90% less disk space on Symantec™ Endpoint Protection Manager.
- Supports embedded systems and Virtual Desktop Infrastructures (VDI) with smaller client size for reduced memory footprint

Smarter Management

Single management console across physical and virtual platforms with granular policy control

- Delivers intelligent security technologies and policy lockdown features in a single high performance agent with a single management console across Windows®, Mac®, Linux®, virtual machines, and embedded systems
- Provides granular policy control with the flexibility to customize policies depending on users and their location
- Supports remote deployment and client management for both Windows® and Mac® systems making it easier to keep remote endpoints up-to-date
- Expands traditional reporting by incorporating multi-dimensional analysis and robust graphical reporting in an easy-to-use dashboard
- Reduces network overhead and decreases the time it takes to get updates by allowing one client to send updates to another (Group Update Provider). This also facilitates more effective updates in remote locations.

Five Layers of Protection

Symantec™ Endpoint Protection on AWS provides five layers of protection in one high performance agent all managed through a single console.

1) Network: Symantec's network threat protection technology analyzes incoming data and blocks threats while they travel through the network before hitting endpoints. Rules-based firewall and browser protection are also included to protect against web-based attacks.

2) File: Signature-based antivirus and advanced file heuristics look for and eradicate malware on a system to protect against viruses, worms, Trojans, spyware, bots, adware, and rootkits

3) Reputation: Symantec's unique Insight™ correlates tens of billions of linkages between users, files, and websites to detect rapidly mutating threats. By analyzing key file attributes, Insight™ can accurately identify whether a file is good or bad and assign a reputation score, effectively protecting against targeted attacks while reducing scan overhead by up to 70 percent.

4) Behavior: SONAR™ leverages artificial intelligence to provide zero-day protection. It effectively stops new and unknown threats by monitoring nearly 1,400 file behaviors while they execute in real-time to determine file risk.

5) Repair: Power Eraser™ aggressively scans infected endpoints to locate advanced persistent threats and remove tenacious malware. Remote support enables the administrator to trigger the Power Eraser scan and remedy the infection remotely from the Symantec™ Endpoint Protection management console.

Extended Policy Control Features

In addition to core protection technologies, Symantec™ Endpoint Protection also provides granular policy controls on the AWS platform, including:

1) Application Control: Allows you to control file and registry access and how processes are allowed to run. It also includes advanced system lockdown features, only allowing whitelisted applications (known to be good) to run, or blocking blacklisted applications (known to be bad) from running.

2) Host Integrity Checking & Policy Enforcement: Ensures endpoints are protected and compliant by enforcing policies, detecting unauthorized changes, and conducting damage assessments with the ability to isolate a managed system that does not meet your requirements

Data Sheet: Endpoint Security

Symantec™ Endpoint Protection on Amazon Web Services (AWS)

Client Workstation and Server System Requirements*	
Windows Operating Systems	
	Windows XP (32-bit, SP3 or later; 64-bit)
	Windows XP Embedded (SP3 or later)
	Windows Vista (32-bit, 64-bit)
	Windows 7 (32-bit, 64-bit)
	Windows 7 Embedded
	Windows 8 (32-bit, 64-bit)
	Windows 8 Embedded
	Windows 8.1
	Windows 10**
	Windows Server 2003 (32-bit, 64-bit, R2 or SP1 or later)
	Windows Server 2008 (32-bit, 64-bit, including R2)
	Windows Server 2012 (64-bit, including R2)
	Windows Small Business Server 2011 (64-bit)
	Windows Essential Business Server 2008 (64-bit)
Macintosh Operating Systems	
	Mac OS X 10.8, 10.9, 10.10, 10.11***
Linux Operating Systems (32-bit and 64-bit versions)	
	Red Hat Enterprise Linux
	SUSE Linux Enterprise (server/desktop)
	Novell Open Enterprise Server
	Oracle Linux
	CentOS
	Ubuntu
	Debian
	Fedora
Virtual Environments	
	Microsoft Azure
	AWS Elastic Compute Cloud (EC2)
	Amazon WorkSpaces
	VMware WS 5.0, GSX 3.2, ESX 2.5 or later
	VMware ESXi 4.1–5.5
	Microsoft Virtual Server 2005
	Microsoft Enterprise Desktop Virtualization (MED-V)
	Microsoft Windows Server 2008, 2012, and 2012 R2 Hyper-V
	Citrix XenServer 5.6 or later
	Virtual Box by Oracle
Hardware Requirements	
	1 GHz CPU or higher
	512 MB of RAM (1 GB recommended)
	1.5 GB of free space on the hard disk

Manager System Requirements	
Windows Operating Systems	
Windows XP (32-bit, SP3; 64-bit, all SPs)	
Windows 7	
Windows 8	
Windows 8.1	
Windows Server 2003 (32-bit, 64-bit, R2, or SP1 or later)	
Windows Small Business Server 2003	
Windows Server 2008 (32-bit, 64-bit, including R2)	
Windows Small Business Server 2008 (64-bit)	
Windows Essential Business Server 2008 (64-bit)	
Windows Small Business Server 2011 (64-bit)	
Windows Server 2012 (64-bit, including R2)	
Hardware	
Intel Pentium Dual-Core or equivalent minimum	
2 GB of RAM (4 GB recommended)	
16 GB or more of free space on the hard drive	
Web Browser	
Microsoft Internet Explorer	
Mozilla Firefox	
Google Chrome	
Database	
Embedded database included or chose from the following:	
SQL Server 2005, SP4	
SQL Server 2008, RTM - SP4	
SQL Server 2008 R2, RTM - SP3	
SQL Server 2012, RTM - SP1; SP2**	
SQL Server 2014	

* For a complete list of system requirements, visit our support page.

** Support added in Symantec Endpoint Protection 12.1.6 MP1a.

*** Support added in 12.1.6 MP2.

* [For a complete list of system requirements visit our support page](#)

**Support added in Symantec™ Endpoint Protection 12.1.6 MP1a

***Symantec™ Endpoint Protection 12.1.6 MP2 supports Mac OS X10.11

Note: System Requirements ONLY apply to BYOL (Bring Your Own License)

About Symantec

Symantec Corporation (NASDAQ: SYMC) is an information protection expert that helps people, businesses and governments seeking the freedom to unlock the opportunities technology brings anytime, anywhere. Founded in April 1982, Symantec, a Fortune 500 company, operating one of the largest global data-intelligence networks, has provided leading security, backup and availability solutions for where vital information is stored, accessed and shared. The company's more than 19,000 employees reside in more than 50 countries. Ninety-nine percent of Fortune 500 companies are Symantec customers. In fiscal 2015, it recorded revenues of \$6.5 billion.
