OneWelcome

Gig Worker Identity

OneWelcome Identity Platform facilitates on-demand work relationships

Thales's OneWelcome advanced CIAM platform enables enterprises to accelerate growth in seasonal peaks. We provide a cloud-first CIAM platform that facilitates and protects temporary workers and their digital identities. Our platform enables non-permanent staff to easily enter, exit and return to an on-demand role - securely and seamlessly.

CIAM is the cornerstone to enabling a gig-based workforce

Companies are increasingly relying on a gig-based workforce to meet their growth needs. But managing, validating and delegating access to in-and-out workflows can be difficult. OneWelcome's holistic CIAM platform supports the entire process, securing and allowing users to register simply.

How can OneWelcome's CIAM solutions enable a gig-based workforce?

Managing the significant influx of identities in on-demand work relationships and peak seasons can become burdensome. We streamline and simplify this entire ecosystem, helping companies to:

Simplify onboarding of temporary workers

Onboard and register temporary staff smoothly. Orchestrate, scale, and automate the onboarding of gig workers with intuitive processes through our cloud based CIAM solution.

Accurately validate and verify temporary worker's identities and credentials

Ensure gig workers' identity is unmistakably correct through eIDs or Bank ID systems. Confirm their qualifications with identity wallets or validated attribute providers that our flexible CIAM platform can easily set up.

Manage guest users effectively

Orchestrate and secure external employee accounts effectively. Promote collaboration without compromising security.

Achieve compliant access to corporate assets

Through point-and-click control capabilities, achieve full compliance with corporate policies and legal regulations when accessing corporate assets.

Benefit from exceptional user control

Allow temporary workers to manage their personal data through a CIAM platform that automates user consent and preference management in accordance with GDPR and other regulations.

Centralize data in one location

Benefit from using a single point to store identity data, and in turn, reduce department silos, increase visibility and efficiency.

Provide frictionless user experience

Allow gig workers to have a smooth, uninterrupted user experience by leveraging a CIAM platform that is user-friendly and can be branded to your style.

Reduce costs from bringing in temporary staff

Enhance agility and eliminate redundancies with a unified process for provisioning temporary employees. Ensure users' access rights are accurate and up to date without the need for manual interventions.

Our CIAM capabilities make on-demand work relationships more efficient

Secure identity proofing and validation

OneWelcome's identity proofing and validation support assures that digital identities can be associated with a real person. It validates identities against third party trusted identity providers, achieving the ultimate level of security. We integrate with commercial and governmental bring-your-own-identity (BYOI) providers through eIDs, Bank-IDs, or other document-centric-identity proofing services.

Efficient registration

Leveraging a flexible platform that enables efficient onboarding and management of business partners and applications, companies are empowered to successfully manage the roles of new users.

Single Sign-On (SSO)

With Single Sign-On, OneWelcome offers fast, secure and seamless access to online services with just one login of their choice.

Multi-factor authentication

This capability adds additional security layers such as biometrics, face recognition, one-time password or mobile login, improving security and user experience.

User management

By streamlining user management with our state-of-the-art CIAM platform, enterprises benefit from capabilities in profile management, password management, and registration.

Delegated administration

Our cloud-based platform helps to enforce the right autonomy and responsibility for every identity, enabling organizations to manage workers' identities with a bird's eye view.

Lifecycle management

Using multiple integrations with backend and source systems, businesses can manage automated provisioning at scale and create a modern directory for today's demands.

About Thales

The people you rely on to protect your privacy rely on Thales to protect their data. When it comes to data security, organizations are faced with an increasing number of decisive moments. Whether the moment is building an encryption strategy, moving to the cloud, or meeting compliance mandates, you can rely on Thales to secure your digital transformation.

Decisive technology for decisive moments.
